

Alice creating an authenticated profile

Alice requesting reference from Company

A creates a smart contract

C gets notified of new request in blockchain

C attaches reference hash for A to contract and stores it in blockchain

C sends reference content to A

Company creates a floating record for **Bob**

C creates an identity check for **B**

DOB + Name

C creates a smart contract containing a reference hash and the identity check

C sends reference content to **B**

When **B** creates a profile, he can claim the reference if his grounded identity matches the ID check

Alice creating a verified CV

A has a number of smart contracts containing references stored on the blockchain

A creates a CV and includes the content of each reference and the address of the smart contract with the reference hash for them
