Travel Chain:

Issue at hand:

Travel agencies tend to sell their customers' data to advertising firms that end up annoying the end user. It is also quiet frequent for payment anomalies to happen, shaking the users' trust in online payment systems.

Solution:

Blockchain and Bitcoins provide us with a solution to those problems. Blockchain keeps the data confidential thus avoiding the risk of the agency selling it to unwanted third parties. Payment using the Bitcoin is more secure than online payment using a credit card. The aim of this project is to provide travelers with a relaxed, fuss-free travel experience that would win their loyalty to the platform.

Provided services:

TravelChain provides its users with a package of three services:

- **Plane tickets purchase**: We will provide our customers with the lowest traveling fares available at the moment.
- **Hotel reservations**: We will provide our customers with affordable prices for hotel room reservations.
- **Carpooling**: Instead of the traditional car-rental, we will provide our customers with a carpooling service that is less constraining for travelers. It is also a cleaner alternative as many travelers can use the same car.
